FIVE MINUTES · ONCE

Connect your Spotify.

Playback controls, lyrics and every style work straight away. Connect your account to unlock **Search**, **Home**, your **Library**, **Liked Songs**, **Artists**, and liking songs or adding them to playlists.

01
Install
Open the app and let it control Spotify.

02
Create a Client ID
Your own free key on Spotify's developer site.

03
Connect
Paste it into the app and approve.

- ✓ **Spotify Premium**
  Spotify requires it for developer apps.
- ✓ **The Spotify desktop app**
  Installed on this Mac. The companion controls it.

NOT AFFILIATED WITH SPOTIFY

PART ONE

01 Install the app.

The app isn't from the App Store, so macOS asks you to confirm it once.

01 Drag **Spotify Companion** into your **Applications** folder.

02 Open it. macOS says it can't verify the app. Click **Done**.

Don't choose Move to Bin. Nothing is wrong with the app, it just isn't notarized by Apple.

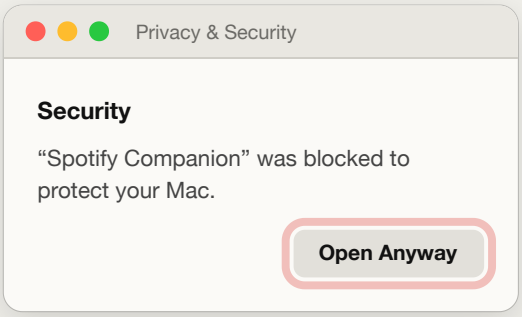

03 Open **System Settings › Privacy & Security**. Scroll down to the message about Spotify Companion and click **Open Anyway**.

Enter your Mac password if asked, then click Open Anyway once more.

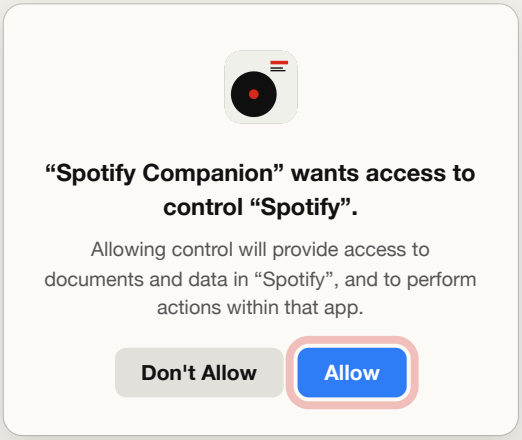

04 When asked whether Spotify Companion may control **Spotify**, click **Allow**.

That's how play, pause, skip and the current song work.

STEP 03 LOOKS LIKE THIS

STEP 04 LOOKS LIKE THIS

You can stop here. Controls, synced lyrics and all seven styles already work. Keep going to bring your whole Spotify library into the app.

PART TWO

02 Create your Client ID.

Spotify only lets apps like this one reach your account through a key you create yourself. It's free.

01 Go to **developer.spotify.com/dashboard** and log in with your Premium account.

02 First time? Accept the Developer Terms and confirm your email if Spotify asks.

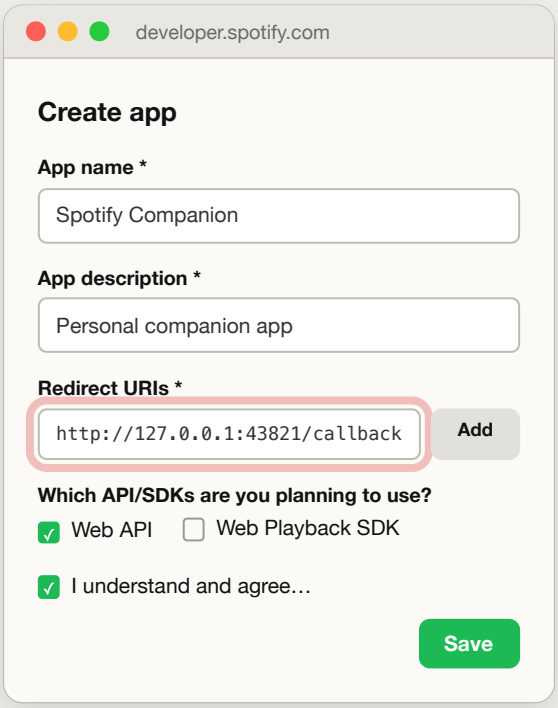

03 Click **Create app** and fill in the form:

App name	**Spotify Companion** (anything)
App description	**Personal companion app** (anything)
Website	Leave empty
Redirect URIs	**The address below, then Add**
APIs used	Tick **Web API**

04 Tick the terms box and click **Save**.

05 On your app's page, click **Settings** and copy the **Client ID**.

THE FORM, FILLED IN

REDIRECT URI · TYPE IT EXACTLY

```
http://127.0.0.1:43821/callback
```

COPY ME

127.0.0.1, not localhost. No spaces. No slash at the end.

! You only need the **Client ID**. Never share the **Client secret** with anyone, and never paste it into the app.

PART THREE

03 Connect.

Paste your Client ID into the app and say yes in your browser.

01 Open Spotify Companion and click the **person icon** at the top right.

02 Paste your Client ID into the **Client ID** box.

03 Click **Connect**. Your browser opens Spotify's sign-in page.

04 Check it's your account and click **Agree**.

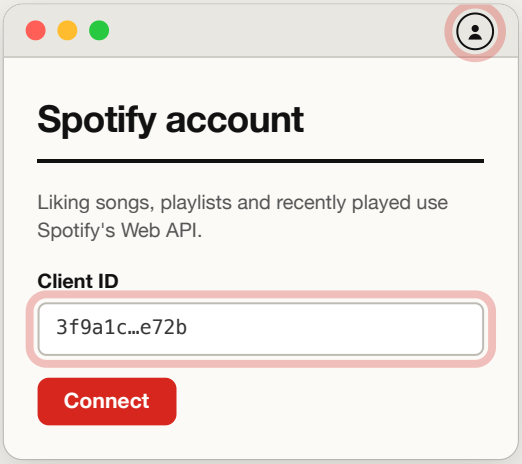

05 The tab says **“Connected. You can close this tab.”** Close it and go back to the app.

The person icon fills in, and Home and Search show your music.

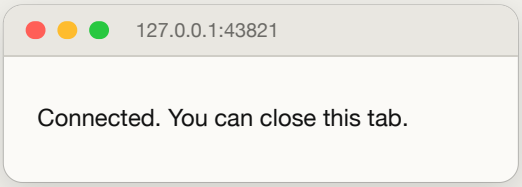

06 If macOS asks to use your keychain, enter your **Mac login password** and click **Always Allow**.

That's where the app keeps you signed in, so you don't have to connect again.

STEPS 01 TO 03

STEP 05

Search
Songs, artists, albums, playlists

For You
Jump back in, top artists, moods

Library
Playlists and albums, sorted like Spotify

Like & add
Save songs, add to playlists

IF SOMETHING GOES WRONG

Fixes.

01 **“INVALID_CLIENT: Invalid redirect URI”**

The Redirect URI doesn't match. In your app's Settings, click Edit, set it to exactly `http://127.0.0.1:43821/callback`, and Save.

02 **“User not registered” or a 403 error**

This Spotify account isn't the app's owner and hasn't been added under User Management (see Share your Client ID below).

03 **The app shows a Reconnect card**

An update added a feature that needs a new permission. Click Reconnect, or Disconnect then Connect again from the person icon.

04 **The browser can't connect after Agree**

Keep Spotify Companion open while you sign in. If another app is using port 43821, quit it and try again.

05 **Buttons do nothing, or no song shows**

Open the Spotify desktop app. If you clicked Don't Allow, turn it on in System Settings › Privacy & Security › Automation › Spotify Companion.

06 **“Quota exceeded” or too many requests**

Spotify limits developer apps. Wait a few minutes and try again.

OPTIONAL

Share your Client ID.

Up to five people, each with their own Premium. It's usually simpler for everyone to make their own (Part two).

01 Open your app on **developer.spotify.com/dashboard**.

02 Click **User Management**.

03 Add their name and their Spotify account's email. Save.

04 Send them your Client ID. They follow Part three.

Spotify Companion is an independent app and isn't made, endorsed or supported by Spotify. Your login stays in your Mac's keychain, and the app never sees your Spotify password.
